

Telecom Customer Churn Analysis

About the Project

Customer retention is a major challenge in the telecommunications industry. The purpose of this project was to analyze customer data, identify factors contributing to customer churn, and provide insights that could help improve customer retention and business performance.

Tools Used

- **Microsoft Excel**
- **Power BI**

What I Did

- **Cleaned and prepared the dataset by checking for missing values, inconsistencies, and data type issues.**
- **Performed exploratory data analysis using Pivot Tables and charts in Excel.**
- **Created measures and KPIs in Power BI to track customer and revenue metrics.**
- **Built an interactive dashboard to analyze customer behavior, churn trends, contract types, payment methods, and revenue performance.**
- **Transformed raw data into meaningful insights to support data-driven decision-making.**

Key Insights

- **Customers on month-to-month contracts showed the highest churn rates compared to customers on longer-term contracts.**
- **Senior citizens were more likely to leave the company than non-senior citizens.**
- **Certain payment methods were associated with higher customer churn.**
- **Customers who churned contributed a significant amount of revenue before leaving, highlighting the financial impact of customer loss.**
- **Contract type and customer tenure appeared to be important factors influencing customer retention.**

Recommendations

- **Encourage customers to switch from month-to-month contracts to longer-term plans through incentives and discounts.**
- **Develop targeted retention strategies for high-risk customer groups.**
- **Improve customer engagement and support services to reduce churn.**

- **Monitor customer segments with higher churn rates and implement proactive retention campaigns.**

Skills Demonstrated

Data Cleaning ,Data Analysis ,Data Visualization , Excel , Power BI , Dashboard Design ,KPI Development ,Business Intelligence ,Insight Generation
